Safety Training Tips

When? Training new employees in company safety policies should be accomplished within the first two to three weeks after hire. The sooner the better! Attempting to integrate safety training with the numerous human resource policies and procedures could cause information overload. Information about safety rules should not be mixed with information about work rules, benefits, payday policies, etc., but should be addressed in separate training sessions to ensure that the correct degree of importance is conveyed to the new employee.

How Much? The extent of safety training will depend on the degree and the number of hazards that have been identified in the operation. Training could last from 30 minutes to several days. To assure that the amount of time scheduled is adequate, conduct a thorough hazard evaluation of all operations and processes.

Training Technique. The training technique selected is directly related to the training objective. The objective should be action-oriented (i.e., *perform, demonstrate, accomplish*, etc.) The chosen training technique should take into consideration that learning is accomplished with *all* the senses; taste, touch, smell, hearing, and sight. Each of these impact learning to varying degrees.

Sense	Percent of Learning
Taste	1%
Touch	1.5%
Smell	3.5%
Hearing	11%
Sight	83%

Based on these percentages, there is a tendency to concentrate on the sense of sight (written instruction, videos, etc.) In some situations this may be right way to go, however, in the majority of training sessions, the use of multiple senses is the most effective. Get the employees involved in the training session. Hands-on demonstrations of safe work practices after instruction, with individual supervision, is the most effective.

Follow-Up. Evaluate initial safety training to ensure that it has been effectively received and assimilated by the new employee. These evaluations should be conducted by the trainer according to an established schedule, and then on an ongoing basis by the immediate supervisor. Any behavior that is recognized as needing correction or modification must be corrected on the spot.

If the learner hasn't learned, the teacher hasn't taught!
